EXPERIENCE

Software Developer / Technical Lead - ABN AMRO Clearing USA

June 2020 - Present

Designing, developing, maintaining, and supporting fault tolerant trade and clearing capture systems; Sequentially processing millions of transactions daily from over two hundred input sources.

- Applying C# and Java programming skills to solve business problems and automate manual processes
- Modernizing legacy systems/applications leveraging technologies such as Apache Kafka to improve system throughput and scalability
- Built a system to interface with FICC as part of the fixed income trade capture and settlement process
- Working in a global and agile team to build the next generation of trade capture and processing systems in AWS

Software Development Intern - ABN AMRO Clearing USA

May - July 2019

- Wrote a program to compare application configuration files as part of the deployment process reducing the number of errors in production deployments
- Implemented a process to package C# code into NuGet packages while maintaining the ability to debug the packaged code by automatically fetching the source files from a remote git server on the fly
- Implemented a code documentation solution with Doxygen

IT Security Intern - ABN AMRO Clearing USA

June - August 2018

- Worked with the IT Security team to automate a manual reconciliation of computing assets on the network against various cybersecurity security toolings using Python
-
